1. Purpose

This document is a focused export test for the AMatriz Typora theme. It is designed to make PDF rendering problems visible quickly: dark background preservation, green text contrast, code block styling, table borders, heading hierarchy, page breaks, and live Typora blocks such as the Table of Contents.

Expected PDF result:

- The page background remains dark.
 - Body text remains green and readable.
 - Code blocks remain dark with visible borders.
 - Tables keep green borders and dark cells.
 - Headings do not split awkwardly from the content below them.
 - The ``[toc]`` block renders as document content, separate from Typora's Outline panel.
-

2. Heading Hierarchy

The document title is the H1 test. The headings below verify H2 through H6 rendering without creating a second top-level document root in Typora's Outline panel.

H2 Export Heading

H3 Export Heading

H4 Export Heading

H5 Export Heading

H6 Export Heading

This paragraph sits after all heading levels so spacing, heading weight, and page-break behavior can be checked in the exported PDF.

3. Paragraphs and Inline Formatting

This paragraph is intentionally long enough to wrap across multiple lines in Typora and in the exported PDF. It should keep comfortable line height and remain readable against the AMatriz dark background without appearing washed out, grey, or black-on-black. If this paragraph clips at the right edge, the theme's editor width or wrapping rules still need attention.

Inline formatting check: **bold text**, *italic text*, ***bold italic text***, ~~strikethrough text~~, ``inline code``, [external link](#), and highlighted text.

Keyboard-style HTML check: `Ctrl` + `S`

4. Lists

4.1 Unordered List

- Top-level item A
 - Nested item A.1
 - Nested item A.1.a
 - Nested item A.2

- Top-level item B
- Top-level item C with `inline code` and **bold text**

4.2 Ordered List

1. First ordered item.
2. Second ordered item.
 1. Nested ordered item.
 2. Another nested ordered item.
3. Third ordered item.

4.3 Task List

- ☒ Completed task should show a clear checked state.
 - ☐ Pending task should show an empty checkbox.
 - ☐ Long pending task text should wrap cleanly without colliding with the checkbox or adjacent lines.
-

5. Blockquotes

“Root quote: the left border should be visible and the quoted text should remain softer than normal body text.”

“Nested quote level 2 should still be readable.”

“Nested quote level 3 should not collapse into the page background.”

6. Code Blocks

6.1 Plain Text Fence

```
AMatriz plain text code block
background: dark
foreground: green
border: visible
```

6.2 CSS Fence

```
:root {
  --amatriz-bg: #030803;
  --amatriz-fg: #00e63a;
  --amatriz-border: #003b00;
}

#write {
  width: calc(100% - 80px);
  max-width: 1280px;
  margin-left: 40px;
  overflow-wrap: break-word;
}

@media print {
  html,
  body {
    -webkit-print-color-adjust: exact;
    print-color-adjust: exact;
  }
}
```

6.3 JavaScript Fence

```
function renderThemeStatus(themeName, exportMode) {  
  const status = {  
    themeName,  
    exportMode,  
    backgroundPreserved: true,  
    timestamp: "2026-05-26"  
  };  
  
  return `${status.themeName}: ${status.exportMode}`;  
}
```

7. Tables

Area	What to Check	Expected AMatriz Result
Page background	Full PDF page behind text	Dark green-black
Body text	Normal paragraphs and list items	Neon green, readable
Code blocks	Fenced code and inline code	Dark fill, green text, visible border
Tables	Header, cells, borders	Dark cells, green borders
Links	Inline and TOC links	Brighter green accent
Page breaks	Headings, tables, code blocks	No awkward split mid-element

7.1 Wider Table

Selector	Surface	Risk	Export Expectation
<code>`html, body`</code>	Editor and PDF root	Renderer may override background	Dark background preserved
<code>`#write`</code>	Main document content	Export may reset margins	Content remains readable
<code>`pre.md-fences`</code>	Code blocks	Blocks may lose fill color	Dark panel retained
<code>` .md-toc`</code>	In-document TOC	Typora controls may appear while editing	Export includes clean TOC content
<code>`table, th, td`</code>	Tables	Borders may fade	Borders remain visible

8. Math

Inline math check: ``$E = mc^2$``

Block math check:

$$\int_0^1 x^2 dx = \frac{1}{3}$$

9. Mermaid Diagram

10. Page Break Stress Section

The next block is intentionally long. It helps reveal whether Typora splits paragraphs, lists, tables, or code fences in uncomfortable places during PDF export.

10.1 Long Paragraphs

AMatriz is intended for engineering notes, build logs, setup procedures, API references, and handoff documents. These documents often contain dense text with many inline code spans such as ``npm install``, ``git status``, ``@media print``, and ``print-color-adjust: exact``. The exported PDF should preserve the dark visual identity while remaining practical to read.

The theme should avoid overly narrow content on wide screens, but the PDF should still use the printable page area well. If this paragraph appears cramped, washed out, or forced onto a white page, the export pipeline is still overriding part of the theme.

10.2 Long List

- Check the first page background.
- Check the TOC links and indentation.
- Check whether the H1 through H6 headings are all visually distinct.
- Check whether inline code remains readable.
- Check whether fenced code blocks keep their border and background.
- Check whether table borders are visible.
- Check whether blockquote borders are visible.
- Check whether task checkboxes are visible.

- Check whether math renders without color clashes.
 - Check whether Mermaid output is readable if Typora renders the diagram before export.
-

11. Final Export Checklist

- Background is dark on every page.
 - Text is green and readable on every page.
 - Code blocks are dark and bordered.
 - Tables are readable.
 - TOC is readable.
 - No major content is clipped.
 - No heading is stranded at the bottom of a page.
 - PDF output is closer to Tailwind Dark than the previous AMatriz export.
-

12. Footnote

This sentence includes a footnote for export testing.¹

1. Footnotes should remain readable and should not lose contrast in the exported PDF. ↩
